

DON'T WAIT TO FIND OUT THE COST OF YOUR DOWNTIME

What would you do if your company's information was not available tomorrow? Would you know how to get it back? Or how long it would take? Your business data is the lifeblood of your company and for every minute of downtime, you're losing valuable business resources. In fact a recent study showed that 43% of North American companies who experienced a data disaster never re-open and another 29% close within 2 years.

Dyrand's *Backup & Disaster Recovery (BDR)* solutions are invaluable in ensuring that your business is always up and running. With Dyrand's online Data Backup service our state of the art software and robust infrastructure, provides you with an enterprise-class online backup service that ensures you can quickly get back online after any kind of data disaster.

SAFEGUARDING YOUR BUSINESS INCLUDES:

Easy and Powerful Backups – Backup a variety of workstations, servers and data including MS Exchange Server, MS Sharepoint, MS SQL Server, MySQL, MS Small Business Server, documents and e-mails.

Automatic peace of mind – After the initial configuration, backups happen automatically and as per your schedule. Dyrand monitors and manages the process remotely without ever accessing you data.

Backup offsite – Backup to a secure offsite server ensures that you can recover your data even in the event of a physical disaster, theft or loss.

Absolute privacy – Your data is encrypted and compressed even before it leaves your computers, ensuring no one without privileges has access to your valuable information.

Point in time restores – Simply and quickly point to a version and click to restore the data.

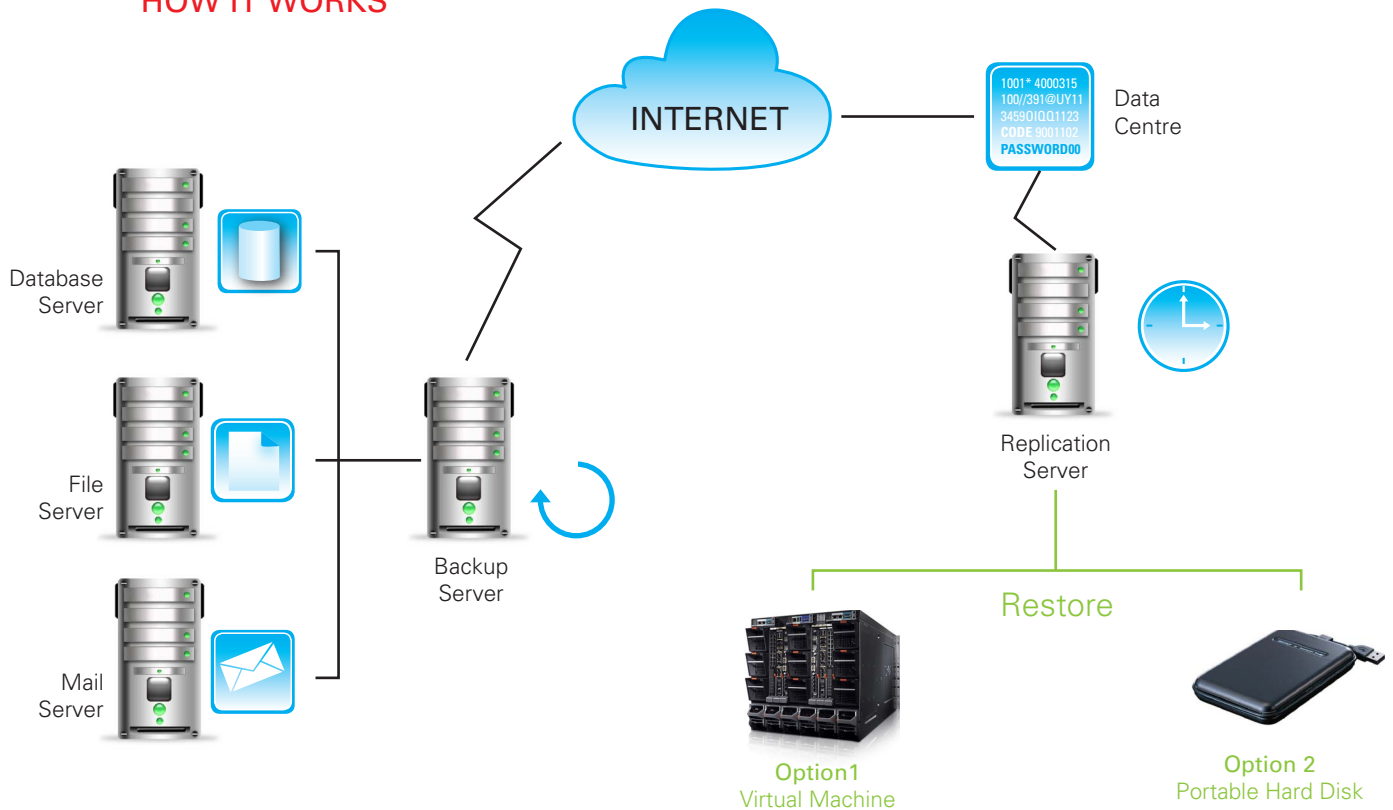

Optimized bandwidth and storage – Intelligent backups of changed data only, after the first initial backup, optimizing bandwidth, storage usage and time.

OPERATING SYSTEM SUPPORT

Dyrand's BDR software is designed to work on the following operating systems:

- Windows desktops and servers
- All common flavours of Linux
- Mac OS X

HOW IT WORKS

Option 1: Your machine(s) can be restored in the data centre as a virtual machine. Your data would be accessed over a secure Virtual Private Network via the Internet. This option would allow you to be in operation again in a matter of hours.

Option 2: Your data can be transferred from the replication server to your location over the Internet. If your data volume is too large, it will be transferred to a portable hard disk at the data centre and shipped to your site.

Contact us today and we'll ensure you'll be up and running after any data disaster.
